

Day 19 Google Antigravity Project ScreenshotsScreenshot

1 – PROJECT CREATION & TASK PROMPT

Description:
Created a new project in Google Antigravity and provided the AI agent with the task prompt to build a **Python Customer Support Assistant**. The prompt included project requirements such as customer input, issue priority detection, and automated response generation.

SCREENSHOT 2 – AI IMPLEMENTATION PLAN

Description:
The AI agent generated a detailed implementation plan before writing the code. The plan explained the project structure, required functions, execution steps, and verification

process.

SCREENSHOT 3 – CODE REVIEW

Description:
Reviewed the AI-generated Python source code in the editor. The code includes input validation, issue categorization, priority classification, and professional response generation using modular functions.

SCREENSHOT 4– WALKTHROUGH DOCUMENT

Description:
Google Antigravity automatically generated a walkthrough document summarizing the implementation, project features, verification scenarios, and expected outputs.

SCREENSHOT 5 – OUTPUT VERIFICATION

Description:
Executed the Customer Support Assistant in the Visual Studio Code terminal. The application accepted user inputs, classified the issue priority, and generated a professional customer support response successfully.
